No - I found a vertical shaft that is unsafe to leave open, this is very high in elevation. The guy is /was nuts....he went into a shaft over there and the ground opened up and he popped out 3 miles away....and then the ground close up behind him...

Hi Leslie,

We have a DD task, it was created back in 2003. There isn't much on the MTS, something mentioned about a shaft closure? I was just wondering if we could close this task? Let me know. Thanks.

i would like to use the money that was used by John to reclaim private ground, but this would be on forest service ground (public- belonging to all) it is a really small job and should be hand shovel back in to the shaft. now is a good time to plan, as access is in July

What? Are you serious? That's just crazy. So what happens from here, is this something that we do (close the shaft)?
